

3.1AF

Pond Aerator

3HP, 240V, Single Phase

Operation

- ⇒ Submersed motor with top intake pushes the water into the air using an open propeller design.
- ⇒ Individual water droplets absorb oxygen from the atmosphere and return to the body of water transferring oxygen from the air and into the water.
- ⇒ Moving water mixes and agitates the water, spreading oxygenated water throughout the body of water.
- ⇒ Single open propeller design allows for greater water flow with a lower likelihood of clogging and smaller water droplets to increase total surface area for oxygen transfer.
- ⇒ Coated stainless steel cage or propeller guard shall catch large debris and assist in reducing the likelihood of clogging while allowing for maximum water flow into the unit.
